CORRRRAL CHORUS

Rev.1.Oct.12.2005

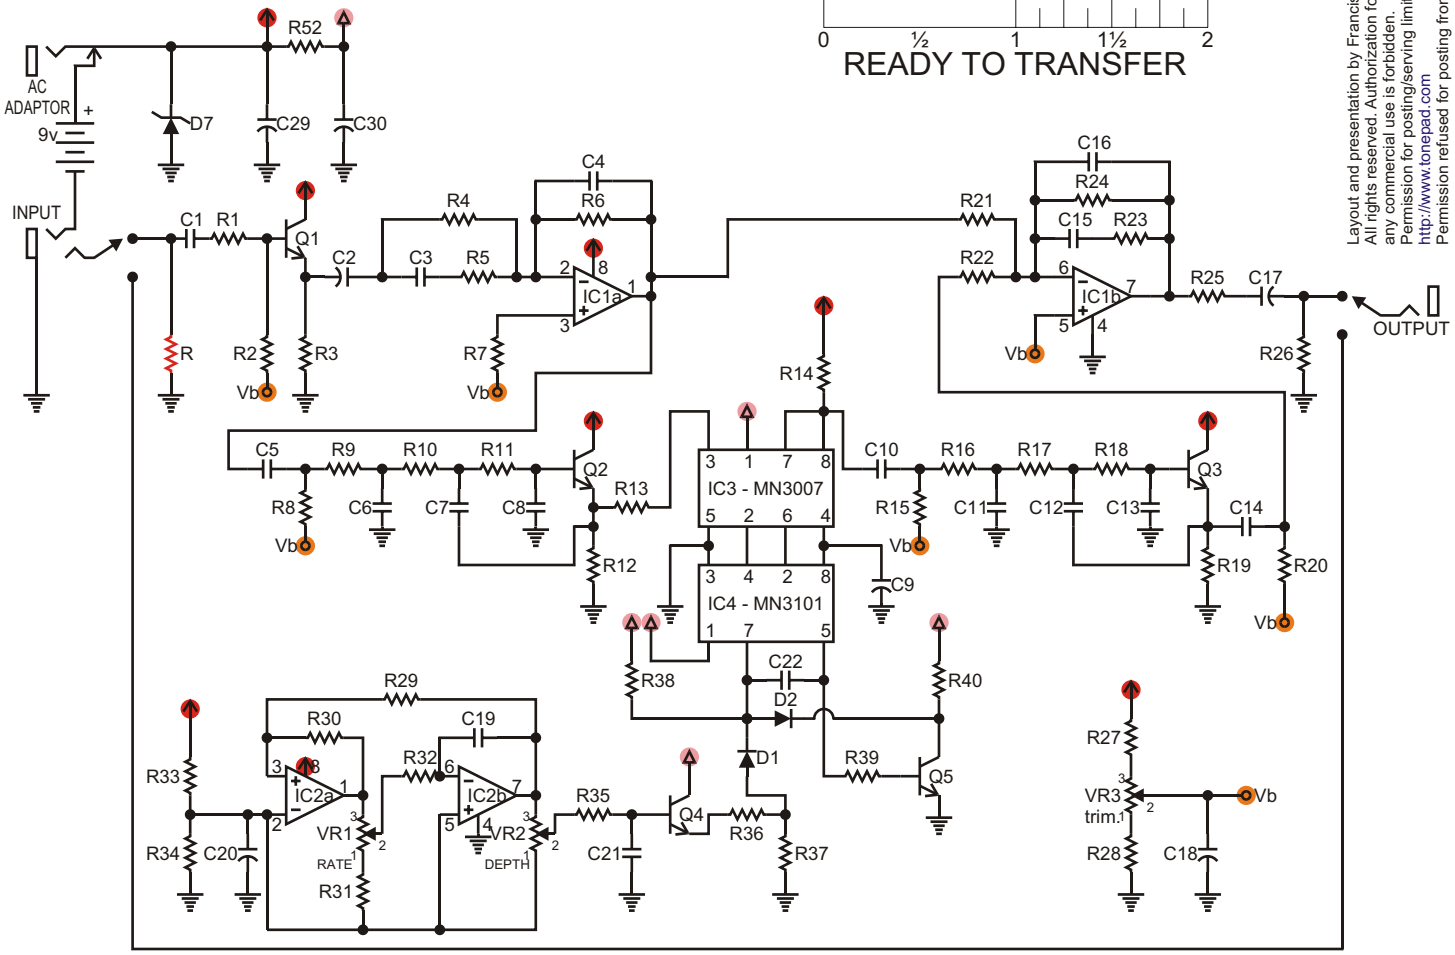

Build the Boss CE2 circuit on this layout. The FET switching has been removed to use true bypass switching. Off board components except for the potentiometers are not shown on the layout. Trademarks are property of their owners.

CORRRRAL CHORUS

Rev.1.Oct.12.2005

Parts list and some mods, these mods will require soldering to flying component leads and components directly soldered to switches. Off board components except for the potentiometers are not shown on the layout. Trademarks are property of their owners.

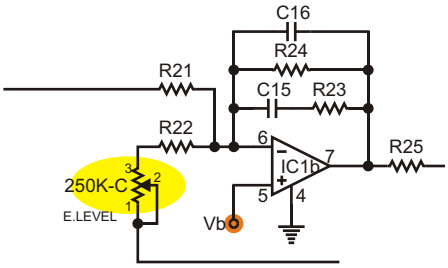

THE VIBRATO MOD

Lift one side of R21 and add a SPST switch like this:

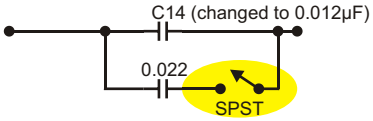

EFFECT LEVEL MOD

Effect level can be made adjustable by adding a 250k rev. Log. potentiometer in series with R22, this mod along with the Wet Bass mod are needed to convert to CE2B (for bass) specs.:

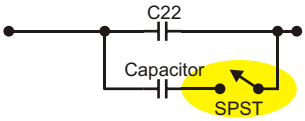

WET BASS SWITCHING MOD

This mod modifies bass response on the modulated signal. This mod along with the Effect Level Mod are needed to convert the pedal to CE2B (for bass) specs. It also can be used on its own. Change C14 to 0.012µF, then add another another capacitor as shown:

CHORUS INTENSITY CAP SWITCH MOD

This mod is for altering the value of the C22 in order to get a deeper chorus intensiy. Use a SPST switch and a 47pF (or other value, experiment!) capacitor wired like this:
